DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 21-50 are rejected under 35 U.S.C. 102(e) as being anticipated by Oguri (US 6518304; 2/11/03. Oguri teaches a fungicidal composition comprising 5 parts formula Ia (BAS 490F) plus 5 parts iprodione (1:1). Oguri teaches a fungicidal composition comprising 5 part formula le (SSF-129) and 5 part iprodione (1:1). See column 8 Formulation Example 8. Oguri teaches a fungicidal composition comprising 1 parts formula Ia (BAS 490F) plus 5 parts iprodione (0.2). Oguri teaches a fungicidal composition comprising 1 part formula le (SSF-129) and 5 part iprodione (0.2). See column 8 Formulation Example 7. Oguri teaches that the fungicidal composition can be present in a liquid or solid carrier along with a surfactant (surface active agent). See column 6 lines 43-51. Oguri teaches that the composition is applied to plants to control

fungus growth at a rate of 0.001 to 1000 g / are. See column 7 lines 32-43. With respect to the instant ratios of ingredients, one having ordinary skill in the art would have been expected to determine the optimum ratios through routine experimentation. One would have been motivated to do this in order to enhance the effectiveness of the invention at controlling fungus growth on plants. With respect to the application rates the prior art range overlaps the instant application rate range (150-7000 g/ha of composition). It is very possible the optimum application rate of the composition would have fallen at a point where the two (prior art and instant application) application rate ranges overlap.
